

# Radio Remote

## Radio Remote

The remote control works with any of the Fastlane range of optical turnstiles, speedgates and barrier-arm optical turnstiles. This allows the guard to be stationed away from behind a desk and stay on the move, and with one push of a button can allow staff and visitors access through the lanes.

The Radio Remote Control is an ideal alternative to the fixed remote console as it allows guards stationed away from the main desk to allow people into the building.

All users in a specific unit within the complex can be stored in a group. For easy identification the group number would correspond to the unit number.

The Receiver acts as a momentary contact thus allowing remote visitor access using (AUX1, AUX2) Fastlane inputs.

Each user has a unique group number, which must be recoded. This method allows 1000 users to be entered into the system.

The system is supplied standard with 3 open collector output channels for greater flexibility and power. Each channel can be programmed to be latching (activate an alarm system or switch on perimeter lighting) or pulsed (operate a gate motor or similar access automation device). Any transmitter button can be programmed to operate any channel.

The Transmitter is powered by a self-contained replaceable battery and is easily coded to the receiver

Units are supplied as a pack, comprising of 1x Receiver, 2x Transmitters (fobs).

# Radio Remote

## Specification

### Receiver Module

DIMENSIONS W 67.7mm, D 31.5 mm

### Transmitter Fob

DIMENSIONS W 35 mm, H 60 mm, D 15 mm

### General Information

OPERATING FREQUENCY	433 MHZ (SAWR Stabilised)
SUPPLY VOLTAGE	12V AC/DC
MAX OPERATING CURRENT	150 mA
SENSITIVITY	-95 dB
OPERATING TEMPERATURE	-15°C to 50 °C
OUTPUT CHANNELS	3 Open collector
CONTACT RATING	3A resistive

### Programming Console/ Receiver Dimensions
